How Computers Work

Greetings Display! Your job is to wait until the CPU tells you to plot an (**x**, **y**) point on the screen. When you are asked to plot a point, find the column that corresponds to the **x**-value and the row that corresponds to the **y**-value and plot the intersection by filling in the square.

Don't show the image to your group partner(s) until the CPU has finished running the entire program.
